

*You are assigned as a junior data analyst by the company in order to give your solutions to the problems described below. When trying to solve the issues, read the problem statement and think carefully about what is being asked. Now, time to start!*

All problems in the first task refer to the open source 'Db' Database. Please familiarize yourself with the tables and column names in order to write accurate queries and get the appropriate answers.

*Note: For the first 4 practice problems use dbo.[Fish] table.*

1. Company has sold too many fish everyday. Each fish has a different weight. Company wants to know each species maximum and minimum of each fish.
2. The Company has many sold to much different fish and they want to see fish which height more than 15 and also width has to be more than 5.
3. The company store has too many fish and each fish has its own 3 lengths. Company wants to see each species fish average lengths.
4. Company sees that some species sell too much. Company knows that species of fish start at "B" and height is more than 10 and smaller than 13. They want to all information about these fishes.
